Devops - youtube playlist

→ What is Devops

→ Devops is a culture that help increase organization ability to deliver product.

→ Automation

→ Quality

→ Monitoring

→ Testing

process of continuous delivery in efficient manner.

Goal is that there should not any manual process.

→ Why Devops?

→ Multiple roles was included for application delivery. work together.

e.g: System Admin, B&RE, server Admin.

→ Everything was manual and teams were collaborating, so process taking time.

→ Then Devops came into role

How Introduce myself as
Devops Engineer

→ I am working as a
devops engineer from last
1 to 2 years

→ I have overall 1 year
of experience.

→ Before that i was working
as a devops MERN stack
developer. I made several
projects to get hands-on
experience in development. At
its fundamentals. If you do
not know how things are
working behind the scene
how we code test, release
build, then devops is difficult
is difficult for you.

→ I was passionate about
devops because of new.

→ As a Devops engineer
i Can take care of
→ Automation. I
I ensure to maintain quality
of Application
can take care of
and Monitering
Continuous testing
when it to about

→ Github Actions for CI/CD.

→ Kubernetes for deployment of Application onto Containers Orchanestization.

→ Ansible for Configuration Managment.

→ Terraform for infrastructure Managment.
